ACCESSORIES CATALOGUE

Our target is to supply an operating table that fully meets the requirements of every surgical speciality. This has been achieved by setting up a R&D team dedicated specifically to accessories which, thanks to the close collaboration with end users (surgeons, anaesthetists, OR personnel, clinical engineers, etc), updates constantly the range of products, given also the new needs in terms of patient positioning.

This catalogue illustrates the wide range of accessories available for OPT operating tables and for the different specialties. All materials used for the manufacturing of these accessories have been carefully selected and have the same high quality requirements of all OPT products.

Whenever technically possible, the accessories and complementary components are compatible with all our tables models, both with fixed table top or with transferable table tops.

Expertise in drawing, excellent standard of production and rigorous final testing of every component ensure an optimal functionality and safety of use.

Specialized since 1919 we have, over the years, profited from external inputs and ideas, and in turn, we have contributed significantly to the evolution of operating tables.

We continue to invest in progress.

ACCESSORIES CATALOGUE

USE OF THE CATALOGUE

This catalogue illustrates the accessories available for OPT tables and for operating systems, divided into different surgical specialties, as well as the accessories dedicated to Anaesthesia.

In the range are also included the accessories dedicated to the specific needs of paediatric surgery, bariatric surgery and radiolucent devices, which are inserted in the different surgical specialties.

For each accessory there is a picture, the OPT code (or codes according to the compatibility with the several OPT table models or to the technical differences such as dimensions, capacity, etc) and technical description.

In order to help looking for the right accessory, at the end of the catalogue there is an index with the indication of the page where this accessory can be found. Moreover, to support the user, it is clearly indicated the compatibility of each accessory to the several OPT tables, besides an essential indication on where to attach it.
